

**Description**

The AZBD10A4IC interface card and PWM servo drive assembly is designed to drive brushless and brushed DC motors at a high switching frequency. The interface card features quick-disconnect connectors. The AZBD10A4IC is fully protected against over-voltage, under-voltage, over-current, over-heating, and short-circuits. A single digital output indicates operating status. The drive interfaces with digital controllers that have analog  $\pm 10V$  output. The AZBD10A4IC can utilize Hall Sensor feedback and operates in Duty Cycle (Open Loop) Mode. This servo drive requires only a single unregulated isolated DC power supply, and is fully RoHS II (Reduction of Hazardous Substances) compliant. Easily accessible test points are available for I/O and Feedback monitoring.

See Part Numbering Information on last page of datasheet for additional ordering options. The AZ Series Hardware Installation Manual is available for download at [www.a-m-c.com](http://www.a-m-c.com).

**Power Range**

|                    |             |
|--------------------|-------------|
| Peak Current       | 10 A        |
| Continuous Current | 5 A         |
| Supply Voltage     | 10 - 36 VDC |

**Features**

- ▲ Detachable Connectors
- ▲ Four Quadrant Regenerative Operation
- ▲ Direct Board-to-Board Integration
- ▲ Lightweight
- ▲ High Switching Frequency
- ▲ Wide Temperature Range
- ▲ Differential Input Command
- ▲ Digital Fault Output Monitor
- ▲ Velocity Monitor Output
- ▲ Single Supply Operation
- ▲ Current Monitor Output
- ▲ Duty Cycle (Open Loop) Mode
- ▲ Compact Size
- ▲ High Power Density
- ▲ 12VDC Operation

**HARDWARE PROTECTION**

- Over-Voltage
- Under-Voltage
- Over-Current
- Over-Temperature
- Short-circuit (phase-phase)
- Short-circuit (phase-ground)

**INPUTS/OUTPUTS**

- Digital Fault Output
- Digital Inhibit Input
- Analog Velocity Monitor
- Analog Current Monitor
- Analog Command Input

**FEEDBACK SUPPORTED**

- Hall Sensors

**MODE OF OPERATION**

- Duty Cycle (Open Loop)

**COMMUTATION**

- Trapezoidal

**MOTORS SUPPORTED**

- Three Phase (Brushless)
- Single Phase (Brushed, Voice Coil, Inductive Load)

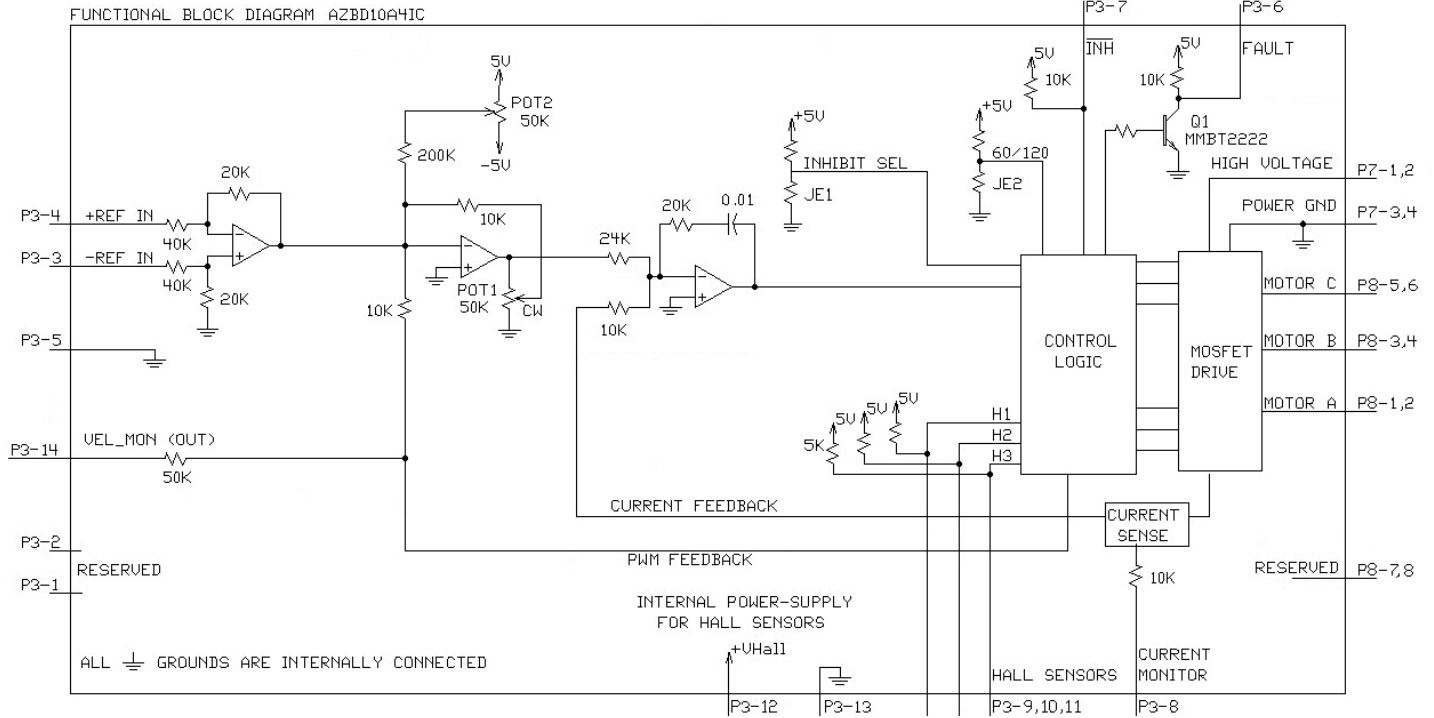

**COMMAND SOURCE**

- $\pm 10 V$  Analog

**COMPLIANCES & AGENCY APPROVALS**

- RoHS II
- UL/cUL Pending
- CE Pending

**BLOCK DIAGRAM**

**Information on Approvals and Compliances**

The RoHS II Directive 2011/65/EU restricts the use of certain substances including lead, mercury, cadmium, hexavalent chromium and halogenated flame retardants PBB and PBDE in electronic equipment.

**SPECIFICATIONS**

| Power Specifications                                |         |   |
|---|---------|---|
| Description   | Units   | Value   |
| DC Supply Voltage Range                             | VDC     | 10 - 36   |
| DC Bus Under Voltage Limit                          | VDC     | 8   |
| DC Bus Over Voltage Limit                           | VDC     | 40  |
| Maximum Peak Output Current <sup>1</sup>            | A       | 10  |
| Maximum Continuous Output Current                   | A       | 5   |
| Maximum Continuous Output Power                     | W       | 171   |
| Maximum Power Dissipation at Continuous Current     | W       | 9   |
| Minimum Load Inductance (Line-To-Line) <sup>2</sup> | μH      | 100   |
| Internal Bus Capacitance <sup>3</sup>               | μF      | 23.5  |
| Low Voltage Supply Outputs                          | -       | +5 VDC (30 mA)  |
| Maximum Output PWM Duty Cycle                       | %       | 92 (±3%)  |
| Switching Frequency                                 | kHz     | 40  |
| Control Specifications                              |         |   |
| Description   | Units   | Value   |
| Command Sources                                     | -       | ±10 V Analog  |
| Feedback Supported                                  | -       | Halls   |
| Commutation Methods                                 | -       | Trapezoidal   |
| Modes of Operation                                  | -       | Duty Cycle (Open Loop)  |
| Motors Supported                                    | -       | Three Phase (Brushless), Single Phase (Brushed, Voice Coil, Inductive Load)   |
| Hardware Protection                                 | -       | Invalid Commutation Feedback, Over Current, Over Temperature, Over Voltage, Under Voltage, Short Circuit (Phase-Phase & Phase-Ground) |
| Mechanical Specifications                           |         |   |
| Description   | Units   | Value   |
| Agency Approvals                                    | -       | RoHS II, UL/cUL Pending, CE Pending   |
| Size (H x W x D)                                    | mm (in) | 43.2 x 38.1 x 18.5 (1.70 x 1.50 x 0.73)   |
| Weight  | g (oz)  | 17 (0.6)  |
| Operating Temperature Range <sup>4</sup>            | °C (°F) | 0 - 85 (32 - 185)   |
| Storage Temperature Range                           | °C (°F) | -40 - 85 (-40 - 185)  |
| Relative Humidity                                   | -       | 0 - 90% Non-Condensing  |
| Form Factor   | -       | PCB Mounted   |
| P3 Connector  | -       | 14-port, 2.0 mm spaced header, vertical mount   |
| P7 Connector  | -       | 4-port, 2.0 mm spaced header, vertical mount  |
| P8 Connector  | -       | 8-port, 2.0 mm spaced header, vertical mount  |

**Notes**

1. Maximum duration of peak current is ~2 seconds. Peak RMS value must not exceed continuous current rating of the drive.
2. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
3. Requires a minimum of 47 μF external bus capacitance between the DC Supply and Power Ground.
4. Additional cooling and/or heatsink may be required to achieve rated performance.

**PIN FUNCTIONS**

| P3 - Signal Connector |                 |  |     |
|-----------------------|-----------------|--|-----|
| Pin                   | Name            | Description / Notes  | I/O |
| 1                     | RESERVED        | Reserved   | -   |
| 2                     | RESERVED        |  | -   |
| 3                     | -REF IN         | Differential Reference Input ( $\pm 10$ V Operating Range, $\pm 15$ V Maximum Input)   | I   |
| 4                     | +REF IN         | Differential Reference Input ( $\pm 10$ V Operating Range, $\pm 15$ V Maximum Input)   | I   |
| 5                     | SIGNAL GND      | Signal Ground (Common With Power Ground).  | GND |
| 6                     | FAULT OUT       | TTL level (+5 V) output becomes high when power devices are disabled due to at least one of the following conditions: inhibit, invalid Hall state, output short circuit, over voltage, over temperature, power-up reset. | O   |
| 7                     | INHIBIT IN      | TTL level (+5 V) inhibit/enable input. Leave open to enable drive. Pull to ground to inhibit drive. Inhibit turns off all power devices.   | I   |
| 8                     | CURRENT MONITOR | Current Monitor. Analog output signal proportional to the actual current output. Scaling is 2 A/V. Measure relative to signal ground.  | O   |
| 9                     | HALL 3          | Single-ended Hall/Commutation Sensor Inputs (+5 V logic level)   | I   |
| 10                    | HALL 2*         |  | I   |
| 11                    | HALL 1          |  | I   |
| 12                    | +V HALL OUT     | Low Power Supply For Hall Sensors (+5 V @ 30 mA). Referenced to signal ground. Short circuit protected.  | O   |
| 13                    | SIGNAL GND      | Signal Ground (Common With Power Ground).  | GND |
| 14                    | VEL MONITOR OUT | Velocity Monitor ( $\pm 2.5$ V range). Analog output proportional to motor speed. Scaling is 1V = 37% duty cycle.  | O/I |

| P7 - Power Connector |         |   |     |
|----------------------|---------|---|-----|
| Pin                  | Name    | Description / Notes   | I/O |
| 1                    | PWR GND | Power Ground (Common With Signal Ground). 3A Continuous Current Rating Per Pin  | GND |
| 2                    | PWR GND |   | GND |
| 3                    | HV IN   | DC Power Input. 3A Continuous Current Rating Per Pin. Requires a minimum of 47 $\mu$ F external capacitance between HV IN and PWR GND pins. | I   |
| 4                    | HV IN   |   | I   |

| P8 – Motor Power Connector |          |  |     |
|----------------------------|----------|--|-----|
| Pin                        | Name     | Description / Notes  | I/O |
| 1                          | MOTOR A  | Motor Phase Outputs*. Current output distributed equally across 2 pins per motor phase, 3A continuous current carrying capacity per pin. | O   |
| 2                          | MOTOR A  |  | O   |
| 3                          | MOTOR B  |  | O   |
| 4                          | MOTOR B  |  | O   |
| 5                          | MOTOR C  |  | O   |
| 6                          | MOTOR C  |  | O   |
| 7                          | RESERVED | Reserved   | -   |
| 8                          | RESERVED |  | -   |

\*For use with Single Phase (Brushed) motors, set Switch 1 to ON (see Hardware Settings below) and only connect motor leads to Motor A and Motor B.

## HARDWARE SETTINGS

### DIP Switch Settings

When set to the ON position, DIP Switch SW1 internally shorts Hall 2 to ground for use with single phase (brushed) motors. Note that in this configuration, all Hall signal pins should be left open, and only motor phase outputs A and B should be used. Default switch setting is OFF (three phase / brushless motors).

DIP Switches SW2, SW3, SW4 are reserved.

### Jumper Settings

Jumpers are SMT, 0 ohm resistors located on the underside of the drive PCB. By default, the drive is configured with the jumpers installed. Typical drive operation will not require the jumpers to be removed. Please contact the factory before jumper removal.

| Jumper | Description   | Configuration |                     |
|--------|---|---------------|---------------------|
|        |   | Not Installed | Installed (default) |
| JE1    | Inhibit logic. Sets the logic level of inhibit pins. Labeled JE1 on the PCB of the drive.               | Low Enable    | Low Inhibit         |
| JE2    | Hall sensor phasing. Selects 120 or 60 degree commutation phasing. Labeled JE2 on the PCB of the drive. | 60 degree     | 120 degree          |

### Potentiometer Functions

Potentiometers are approximately linear and have 12 active turns with 1 inactive turn on each end.

| Potentiometer | Description  | Turning CW                           |
|---------------|--|--------------------------------------|
| 1             | Loop gain adjustment for duty cycle mode. Turn this pot fully CCW in current mode. Located closest to the corner of the PCB. | Increases gain                       |
| 2             | Offset. Used to adjust any imbalance in the input signal or in the amplifier. Located furthest from the corner of the PCB.   | Adjusts offset in negative direction |

**MECHANICAL INFORMATION**

**P3 – I/O Connector**

|                       |   |   |
|-----------------------|---|---|
| Connector Information | 14-port, 2.0 mm spaced header, vertical mount |   |
| Mating Connector      | Details                                       | Molex: P/N 51110-1451 (housing) ; 50394-8051 (crimp pins) |
|                       | Included with Drive                           | Yes   |

**P7 – Power Connector**

|                       |  |   |
|-----------------------|--|---|
| Connector Information | 4-port, 2.0 mm spaced header, vertical mount |   |
| Mating Connector      | Details                                      | Molex: P/N 51110-0460 (housing) ; 50394-8051 (crimp pins) |
|                       | Included with Drive                          | Yes   |

**P8 – Motor Power Connector**

|                       |  |   |
|-----------------------|--|---|
| Connector Information | 8-port, 2.0 mm spaced header, vertical mount |   |
| Mating Connector      | Details                                      | Molex: P/N 51110-0860 (housing) ; 50394-8051 (crimp pins) |
|                       | Included with Drive                          | Yes   |

**MOUNTING DIMENSIONS**

**PART NUMBERING INFORMATION**

ADVANCED Motion Controls servo drives are available in many configurations. Note that not all possible part number combinations are offered as standard drives. All models listed in the selection tables of the website are readily available, standard product offerings.

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.

**Examples of Modifications and Customized Products**

- |   |  |
|---|--|
| <ul style="list-style-type: none"> <li>▲ Integration of Drive into Motor Housing</li> <li>▲ Mount OEM PCB onto Drive Without Cables</li> <li>▲ Multi-axis Configuration for Compact System</li> <li>▲ Custom PCB and Baseplate for Optimized Footprint</li> <li>▲ RTV/Epoxy Components for High Vibration</li> <li>▲ OEM Specified Connectors for Instant Compatibility</li> <li>▲ OEM Specified Silkscreen for Custom Appearance</li> <li>▲ Increased Thermal Limits for High Temp. Operation</li> </ul> | <ul style="list-style-type: none"> <li>▲ Integrate OEM Circuitry onto Drive PCB</li> <li>▲ Custom Control Loop Tuned to Motor Characteristics</li> <li>▲ Custom I/O Interface for System Compatibility</li> <li>▲ Preset Switches and Pots to Reduce User Setup</li> <li>▲ Optimized Switching Frequency</li> <li>▲ Ramped Velocity Command for Smooth Acceleration</li> <li>▲ Remove Unused Features to Reduce OEM Cost</li> <li>▲ Application Specific Current and Voltage Limits</li> </ul> |
