- POINT** Notes on Selection
- (1) Operating the belt type actuator at low speeds may cause vibration and/or resonance. Therefore, please set the speed at 100mm/s or faster.
 - (2) Since the RCP2 series use a pulse motor, the load capacity decreases at high speeds. Check in the Speed vs. Load Capacity graph to see if your desired speed and load capacity are supported.
 - (3) The load capacity is based on operation at an acceleration of 0.5G. 0.5G is the upper limit for the acceleration.

■ Speed vs. Load Capacity
Due to the characteristics of the pulse motor, the RCP2 series' load capacity decreases at high speeds. In the table below, check if your desired speed and load capacity are supported.

Note:
Graph ① is for standard specifications, with settling time of 0.5s for calculating the positioning time.
Graph ② reflects some changes in the controller settings. The load capacity is lower, however the settling time is decreased to 0.2s.
If the load capacity is lower than graph ②, and you want to shorten the positioning time, change the controller settings. (See the manual for details.)
(Vertical operation is not possible.)
