

RCP2-RA6C

ROBO Cylinder Rod Type 64mm Width Pulse Motor Straight Type

■ Configuration: **RCP2** — **RA6C** — **I** — **56P** — — — — —

Series — Type — Encoder — Motor — Lead — Stroke — Compatible Controllers — Cable Length — Option

I: Incremental * The Simple absolute encoder is also considered type "I".
 56P: Pulse motor 56 □ size

Lead: 16 : 16mm
 8 : 8mm
 4 : 4mm

Stroke: 50: 50mm
 300: 300mm (50mm pitch increments)

Compatible Controllers: P1: PCON, RPPCON, PSEL, P3: PMEC, PSEP
 Cable Length: N : None, P : 1m, S : 3m, M : 5m, X □ : Custom, R □ : Robot cable
 Option: B : Brake, FL : Flange, FT : Foot bracket, NM: Reversed-home

* See page Pre-35 for an explanation of the naming convention.

- POINT** Notes on Selection
- When the stroke increases, the maximum speed will drop to prevent the ball screw from reaching the critical rotational speed. Use the actuator specification table below to check the maximum speed at the stroke you desire.
 - Since the RCP2 series use a pulse motor, the load capacity decreases at high speeds. Check in the Speed vs. Load Capacity graph to see if your desired speed and load capacity are supported.
 - The load capacity is based on operation at an acceleration of 0.2G. 0.2G is the upper limit of the acceleration. In addition, the horizontal load capacity is based on the use of an external guide. If an external force is exerted on the rod from a direction other than the motion of the rod, the detent may become damaged.

■ Speed vs. Load Capacity
 Due to the characteristics of the pulse motor, the RCP2 series' load capacity decreases at high speeds. In the table below, check if your desired speed and load capacity are supported.

Actuator Specifications

■ Lead and Load Capacity (Note 1) Please note that the maximum load capacity decreases as the speed increases.

Note:
Do not apply any external force on the rod from any direction other than the direction of the rod's motion. If a force is exerted on the rod in a perpendicular or rotational direction, the detent may become damaged.

- *1. The motor-encoder cable is connected here. See page A-39 for details on cables.
- *2. When homing, the rod moves to the M.E.; therefore, please watch for any interference with the surrounding objects.
ME: Mechanical end
SE: Stroke end
The values enclosed in "()" are reference dimensions.
- *3. Please note that there is no T-slot on the base of the brake unit.
- *4. The orientation of the bolt will vary depending on the product.

* Compared to the standard model, the brake-equipped model is longer by 72.5mm and heavier by 0.9kg.
