

AKM[®] 2G Servo Motors

The Next Generation of Servo Motors Offering Industry Leading Performance with a Compact Footprint

KOLLMORGEN

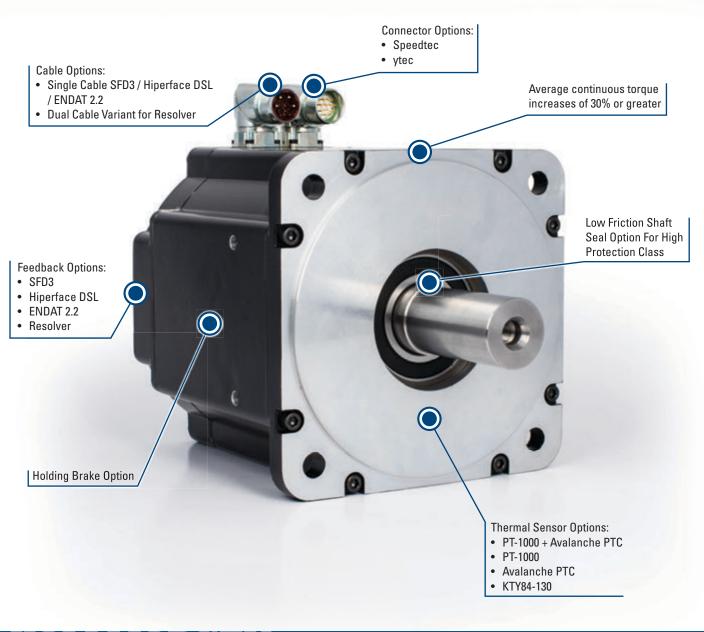

AKM[®]2G represents the latest evolution of the industry leading AKM motor product family.

With average continuous torque increases of 30%, OEMs and users can achieve substantial machine performance increases without increasing the size of the motor.

The improved torque density allows a smaller motor to be used which reduces the machine footprint without sacrificing performance.

- Extensive Selection of Feedback options to match application and performance requirements
- Shaft, mounting and connector options for optimal flexibility
- Holding Brake option

KOHHMORCEN

Get the same performance in 20% less space.

For new machine designs, the AKM2G allows customers to decrease the size, footprint, and complexity of the machine, while still getting the power and performance they need.

The AKM2G drops right into existing machine designs to increase performance, when compared to competing motors, without increasing the size of the motor.

The AKM2G features six sizes with performance levels between 0.3 and 10kW. It will offer selectable options such as feedbacks, mounting configurations, and performance capabilities. Due to the modular structure of their products, Kollmorgen is better equipped than competitors to adapt motors to the requirements of a specific application in parallel with standard production needs. Machine builders are then able to choose from a wider range of standard models that leverage Kollmorgen's extensive product and application knowledge.

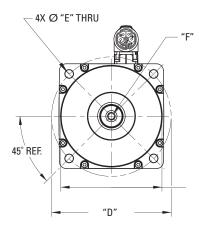

AKM2G motors are optimized for use with the Kollmorgen AKD® Servo Drive and the forthcoming AKD® 2G family of new generation servo drives, but are also capable of providing all their design benefits in conjunction with the customer's choice of servo drives.

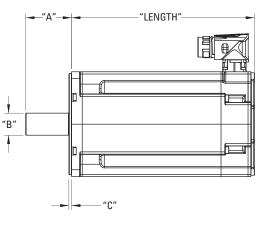

Kollmorgen has been offering single-cable technology since 1995.

Kollmorgen will continue to offer the other AKM[®] servo motors with performance levels between 0.075 and 19.5 kW, as well as food-grade, wash-down, and the innovative AKMH[™] Hygienic Stainless Steel motors for wash-down and food grade applications where machine builders and customers require the highest performance and most durable product in the harshest of environments.
