

HIGH PERFORMANCE SERVO MOTORS

■ PMA Series

- 5 Frame Sizes \approx 55, 70, 115, 142 and 190mm Square
- 0.21 - 54 Nm Continuous Torque Range

■ PMB Series

- 3 Frame Sizes
- Size 17, NEMA 23 and 34 Mounts
- 0.22 - 4.8 Nm Continuous Torque Range

■ S Series

- 2 Frame Sizes
- Available in NEMA 23 and 34 Mounts
- 0.5 - 6.6 Nm Continuous Torque Range

■ R Series

- 5 Frame Sizes \approx 2, 3.25, 4.25, 5.75 and 7.5 Inches Square
- Explosion Proof Models Available
- 0.32 - 50 Nm Continuous Torque Range

PACIFIC SCIENTIFIC BRUSHLESS SERVO MOTORS

A Full Spectrum of Powerful Brushless Servomotors

Pacific Scientific servomotors are built for long, maintenance-free service life. Once installed, you probably won't have to look at them

again. The motors in the following pages feature Neodymium-iron-boron or Samarium cobalt magnets for the highest torque-to-inertia ratios possible. Anti-cog stator designs deliver smooth low-speed performance.

PMA Series

The PMA Series of brushless servomotors delivers a comprehensive line of rugged, cost-effective servomotors. Covering frame sizes from 55mm square to 190mm square and a continuous rated torque range of 0.21 to 54 Nm, these motors offer an economic means to satisfy the requirements of your application. Standard IP65 sealing and the availability of IP67 washdown duty as an option on selected models allows the PMA Series to stand up to the rigors of the factory floor. Global certifications and input voltages on most models to 650 volts assure your machine's acceptance worldwide.

PMB Series

The PMB Series of brushless servomotors introduces an IP40 construction motor in three frames; size 17 and NEMA 23 & 34 to address your need for a high-performance motor in higher-volume applications. With a continuous rated torque range from 0.22 to 4.8 Nm, the cost-effective PMB motors complement our full line of servos.

S Series

The S Series brushless servomotors offer continuous torques from 0.5 to 6.6 Nm. Available in two frame sizes with both metric and NEMA 23 & 34 mounting faces, these compact motors squeeze a lot of torque into a small package.

R Series

R Series servomotors offer the highest torque-to-inertia ratios in the industry. Engineered for the highest dynamic response available, these motors come in five frame sizes – both NEMA and metric mountings. The R Series covers a continuous rated torque range from 0.32 to 50 Nm.

Pacific Scientific Digital Brushless Servo Drives – Harness the Power

When these motors are combined with Pacific Scientific's broad offering of digital brushless servo drives, they offer a cost-effective, high-performance solution that's tough to beat. The systems package motors shown on pages 5 to 9 are only the tip of the iceberg. All of the brushless servomotors are customizable — often with minimal impact on delivery times. From feedback options to application-specific windings, we can help with your servo needs.

Pacific Scientific's SC/SCE900 series brushless servo drives continue to be the flagship of our servo drives. No other brushless servo drive offers higher performance. No other drive offers broader functionality.

The PC800 family of brushless servo drives offers a cost-effective, small drive with the best lead time in the industry.

BRUSHLESS SERVO MOTORS FEATURES & BENEFITS

The PC3400 Series of brushless servo drives brings to you a family of cost-effective, easy-to-use, intelligent servos from the leaders in service and performance.

Smart technology. Motion simplified.

These systems are a prime example of Pacific Scientific's commitment to offer you smart technology — the highest-performance products available, customized to suit your applications, and backed by unmatched customer support and quality. We want to help make your job easier. For more information, contact our Customer Response Center at (815) 226-3100, or visit our website at www.pacsci.com.

FEATURES	BENEFITS
PMA/S/R Series Motors	
Rugged Brushless Construction	Eliminates brush replacement maintenance Stands up to the rigors of the factory floor
High torque over wide speed range	Improved machine throughput
Anti-cog motor design	Smooth low-speed operation
IP65 TENV construction standard	Withstands rigorous environments
Two year warranty	Quality and reliability for reduced machine downtime
Class H insulation	Longer life for reduced machine downtime
Overtemperature thermistor	Protection against motor damage
Global approvals and agency recognition	Eases recognition process for a machine
Multiple feedback options	Allows numerous control methods
Brake option	Improved machine safety
PMA/S Series Motors	
IP67 protection on selected PMA models	Withstands washdown
Neodymium-iron-boron magnets	Maximum performance, maximum value
High quality Interconnectron connectors	Faster installation and maintenance
High voltage models available	Improved application flexibility
S/R Series Motors	
NEMA mounting available	Improved application flexibility
Steel bearing inserts	Longer life for reduced machine downtime
R Series Motors	
High torque-to-inertia ratios	Fast acceleration, improved dynamic response
PMB Series Motors	
MS or AMP mini Mate-N-Lock® connector options	Improved application flexibility
IP40 Construction	Improved cost-effectiveness for higher volume applications

How to use this selection guide

Use the selection overview on page 2 to identify motors available to fit your system voltage, torque and speed requirements. Detailed system combinations with ratings are shown on pages 5 - 9. The table of contents to the right will help you find more information on each motor family.

Information on the Pacific Scientific drives mentioned in the following pages can be found in the Pacific Scientific publication “High Performance Servo Drives.” A Copy of this publication can be obtained by calling Pacific Scientific, or you can get one by visiting our website at www.pacsci.com

- If you are already familiar with these motors and their available options, refer to the Model Number Codes on pages 10, 16, 20, 23 and 25 to verify coded information prior to ordering.
- If you are not familiar with these motors and their available options, refer to the index at the right. Note that each frame size is covered individually and the technical data (last) applies to all motors. Construct a model number after all the technical parameters, including options, are determined.

Our sizing and selection program, Optimizer™ 3.0 can be helpful in determining the correct motor for your application. Input the parameters for your specific application and specify your drive voltage, current and output type and Optimizer will find the motors that fit the bill. Ask for your copy today.

HOW TO BUILD A SERVO DRIVE & MOTOR SYSTEM

System torque/speed information on the following pages are designed to help you select the optimum brushless servo motor/controller combination.

The nominal values in this data illustrate performance for the recommended motor/controller systems.

DRIVE & MOTOR PERFORMANCE CURVES

The performance characteristics of a brushless servo system (motor/controller combination) are described by a torque/speed operating envelope. As shown above, the shaded areas of the curve indicate the continuous duty and intermittent duty zones of the system.

Continuous Duty Zone

The continuous duty zone is bordered by the maximum continuous torque line up to the rated speed of the motor.

The continuous torque line is set by either the motor's maximum rated temperature, or the controller's rated continuous current output, whichever is less. The system voltage line is set by the voltage rating of the controller, the line voltage supplied, and the motor winding.

The system can operate on a continuous basis anywhere within this area, assuming the motor temperature is 40°C or less, ambient. Refer to the Test Conditions on the pages that follow.

Intermittent Duty Zone

The intermittent duty zone is bordered by the peak torque line and the system voltage line.

The peak torque line is set by either the controller's peak current rating, which the

controller can produce for a limited time, or the maximum rated current for the motor, whichever is less. Refer to the Rating Data on the pages that follow.

NOTE: higher torque levels may be achievable at higher power levels. Consult Pacific Scientific for more details.

The system voltage line is set by the voltage rating of the controller, the line voltage applied and the motor winding.

Operation in the intermittent zone must be limited to a duty cycle that will produce an RMS system torque falling within the continuous duty area. The RMS torque value is defined by the magnitude of the intermittent torque and the percentage of the time spent at that torque.

Zero - Peak, or RMS?

Current brushless drive technology uses a sinusoidal output. Pacific Scientific rates its systems using RMS values to accurately reflect system performance operating with a sinusoidal waveform.

Older published ratings were based on 0 - peak values, using a trapezoidal waveform.

Optimizer 3.0

For more information on any motor on the following pages, or to take a closer look at

detailed torque/speed information, take a look at our sizing and selection program, Optimizer™ 3.0. With Optimizer's sine/trapezoidal conversion algorithm, you can see how our motors pair up with a trapezoidal drive, too. Call Pacific Scientific at 815-226-3100 to get your free copy today, or visit our website at www.pacsci.com.

Additional References

On the pages that follow, each individual system has reference points in a table. In addition to rating points for peak (T_{PS}) and continuous torque (T_{CS}) ratings at stall, each system has:

- Rated speed (W_R)
- Continuous torque at rated speed (T_{CR})
- Peak torque at rated speed (T_{PR})
- Motor unloaded speed (W_{NL})

To construct a curve, follow the guidelines presented in the generic curve above.

System rated speeds and torques are based on the intersection of the system voltage line and the peak current line. Differing peak currents will impact rated system speeds.

The points are provided for reference for use in comparing and sizing systems.

① See page 4 for definitions of ratings.

② Peak torque ratings are for 5 seconds.

③ Peak torque ratings are for 2 seconds.

④ Peak torque ratings are for 1 second.

⑤ Peak torque ratings are for .5 second.

⑥ Rated speed is provided for operation on 240V ac 3-phase line. Reduce to approximately 85% for 240V ac 1-phase line operation and to 40% for 120V ac 1-phase line operation.

⑦ Includes resolver feedback inertia.

⑧ Each system requires one feedback and one motor power cable.

⑨ Characteristics shown with drive default parameters limited to 2.5x the motor's continuous rating. Higher peak system performance available. Contact the factory.

① See page 4 for definitions of ratings.
 ② Peak torque ratings are for 5 seconds.
 ③ Peak torque ratings are for 2 seconds.
 ④ Peak torque ratings are for 1 second.

⑤ Peak torque ratings are for .5 second.
 ⑥ Rated speed is provided for operation on 240V ac 3-phase line. Reduce to approximately 85% for 240V ac 1-phase line operation and to 40% for 120V ac 1-phase line operation.

⑦ Includes resolver feedback inertia.
 ⑧ Each system requires one feedback and one motor power cable.
 ⑨ Characteristics shown with drive default parameters limited to 2.5x the motor's continuous rating. Higher peak system performance available. Contact the factory.

① See page 4 for definitions of ratings.
 ② Peak torque ratings are for 5 seconds.
 ③ Rated speed is provided for operation on 480V ac 3-phase line.

④ Includes resolver feedback inertia.
 ⑤ Each system requires one feedback and one motor power cable.

PMA SERIES BRUSHLESS SERVO MOTORS

THE MOST RUGGED, COMPREHENSIVE LINE OF COST-EFFECTIVE SERVOMOTORS

- ① Right-Angle type standard; 6-Pin Power = 6PP etc.; 12-Pin Sensor, 0deg. Code.
- ② Encoder Mount: Motor prepared to mount external encoder (ROD426).
- ③ Standard thermal sensor: Thermistor.
- ④ Mating Connectors available separately. Contact Pacific Scientific.
- ⑤ With commutating encoder option, standard feedback connector is 17-pin. See page 32.
- ⑥ Oil seal available on PMA1, PMA2 and PMA4 models only (PMA4 requires special endbell with seal option).
- ⑦ For more details on encoder mounting provisions, contact Pacific Scientific.
- ⑧ Commutating encoder option available on PMA2, PMA4, PMA5 and PMA6 models only.
- ⑨ Sin Cos encoder option available on PMA4, PMA5 and PMA6 models only.
- ⑩ PMA2 models accept *either* oil seal option or brake option — not both.

PMA1 SERIES MOTOR

- 6-pole synchronous servomotors
- Neodymium-iron-boron magnets for maximum torque
- 240V ac, 320V dc bus maximum operation
- Available with integral brake
- IP65 or optional IP67 protection
- Anti-cog stator design
- High-quality Interconnectron connectors
- Rated speeds to 9,000 RPM

The PMA1 Series Motors cover a continuous torque range from 0.21 to 0.6 Nm. These compact motors are well-suited for speed, and position control applications that require maximum performance in minimum space.

PMA SERIES

RATINGS AND CHARACTERISTICS

Motor parameters and winding data. See system data beginning on page 4 for typical torque/speed performance.

PARAMETER	SYMBOL	UNITS	PMA11	PMA12	PMA13

Note: Brake option adds 25 mm (.98") to total length.

PMA2 SERIES MOTOR

- 6-pole synchronous servomotors
- Neodymium-iron-boron magnets for maximum torque
- 240V ac, 320V dc bus maximum operation
- Available with integral brake
- IP65 or optional IP67 protection
- Anti-cog stator design
- High-quality Interconnectron connectors
- Rated speeds to 7,400 RPM

The PMA2 Series motors cover a continuous torque range from 0.5 to 2.6 Nm. These compact motors are well-suited for speed and position control applications requiring maximum performance in minimum space. The PMA2 Series is available with a commutating encoder, in addition to the standard resolver primary feedback, allowing for integration with other control schemes.

PMA4 SERIES MOTOR

- 6-pole synchronous servomotors
- Neodymium-iron-boron magnets for maximum torque
- 240V or 480V ac operation
- Available with integral brake
- IP65 or optional IP67 protection
- Anti-cog stator design
- High-quality Interconnectron connectors
- Rated speeds to 6,800 RPM

The PMA4 Series motors cover a continuous torque range from 2.6 to 10.2 Nm. These rugged motors are well-suited for speed and position control applications requiring maximum performance at maximum value. The PMA4 Series is available with commutating encoder or SinCos encoder feedback devices, in addition to the standard resolver primary feedback, allowing for integration with other control schemes.

PMB SERIES BRUSHLESS SERVO MOTORS

**COST-EFFECTIVE, HIGH PERFORMANCE FOR HIGHER VOLUME
LIGHT-INDUSTRIAL APPLICATIONS**

① Mating connectors not provided.
② Thermistor not available on PMB1 motors with resolver feedback.

PMB1 SERIES MOTOR

- 4-pole synchronous servomotors
- Neodymium-iron-boron magnets for maximum torque
- 240V ac, 320V dc bus maximum operation
- IP40 construction
- MS-type or AMP mini Mate-N-Lock® connectors on 18" leads
- Rated speeds to 11,000 RPM

The PMB1 series of cost-effective brushless servomotors covers a continuous torque range from 0.22 to 0.50 Nm. These compact motors are well-suited for speed and position control applications requiring high acceleration and torque in a compact package — especially for light-industrial, high-volume applications.

RATINGS AND CHARACTERISTICS

PMB3 SERIES MOTOR

- 8-pole synchronous servomotors
- Neodymium-iron-boron magnets for maximum torque
- 240V ac, 320V dc bus maximum operation
- IP40 construction
- MS-type or AMP mini Mate-N-Lock® connectors on 18" lead
- Rated speeds to 6,000 RPM

The PMB3 series of cost-effective brushless servomotors covers a continuous torque range from 1.62 to 4.84 Nm. These compact motors are well-suited for speed and position control applications requiring high acceleration and torque in a compact package — especially for light-industrial, high-volume applications.

PMB SERIES

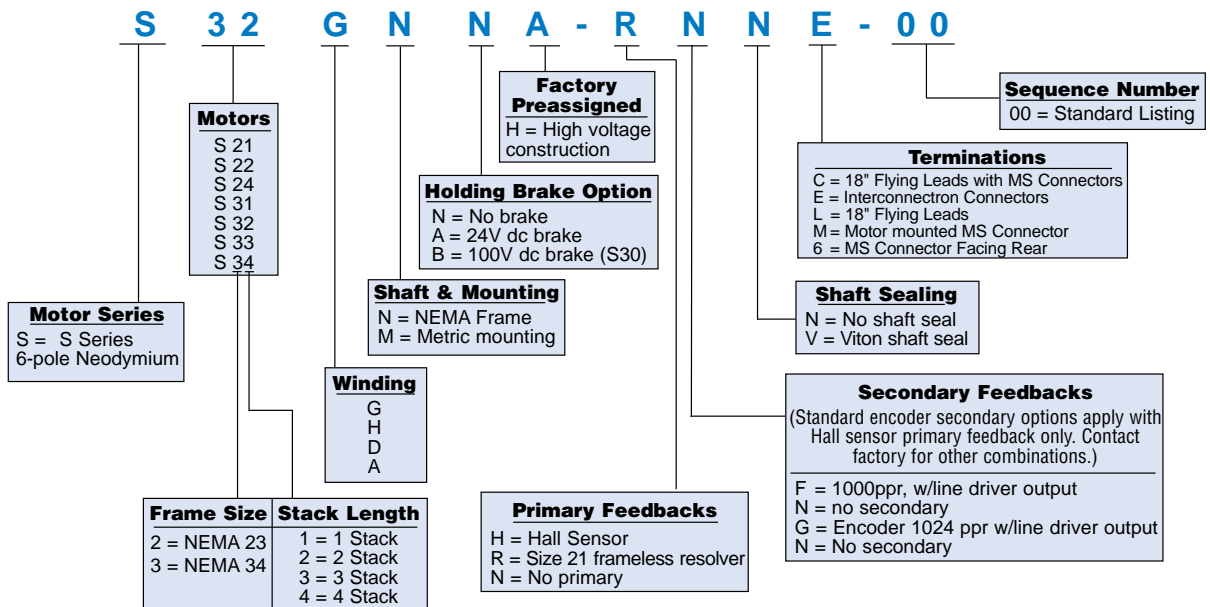

S SERIES BRUSHLESS SERVO MOTORS

HIGH TORQUE PER FRAME SIZE — MEDIUM INERTIA FOR IMPROVED LOAD MATCHING

MODEL NUMBER CODE

To construct a motor listing, select the combination of features required and put all the coded information in the proper sequence. Please account for all entries. The model number shown is an example of a properly specified motor.

S20 SERIES MOTOR

- 6-pole synchronous servomotors
- Neodymium-iron-boron magnets for maximum torque
- Long-life bearing system
- IP65 protection
- Anti-cog stator design
- High-quality Interconnectron connectors
- Rated speeds to 12,500 RPM

The S20 Series motors cover a continuous torque range from 0.32 to 1.6 Nm. These compact motors are well-suited for speed and position control applications requiring maximum performance in minimum space. The S20 Series is available with other primary and secondary feedback devices, in addition to the standard resolver primary feedback, allowing for integration with other control schemes.

mm (in.)

S30 SERIES MOTOR

- 6-pole synchronous servomotors
- Neodymium-iron-boron magnets for maximum torque
- 240V to 480V ac operation
- Long-life bearing system
- IP65 protection
- Anti-cog stator design
- High-quality Interconnectron connectors
- Rated speeds to 3,900 RPM

The S30 Series motors cover a continuous torque range from 1.9 to 6.6 Nm. These compact motors are well-suited for speed and position control applications requiring maximum performance in minimum space. The S30 Series is available with other primary and secondary feedback devices, in addition to the standard resolver primary feedback, allowing for integration with other control schemes.

RATINGS AND CHARACTERISTICS

Motor parameters and winding data. See system data beginning on page 4 for typical torque/speed performance.

R20 SERIES

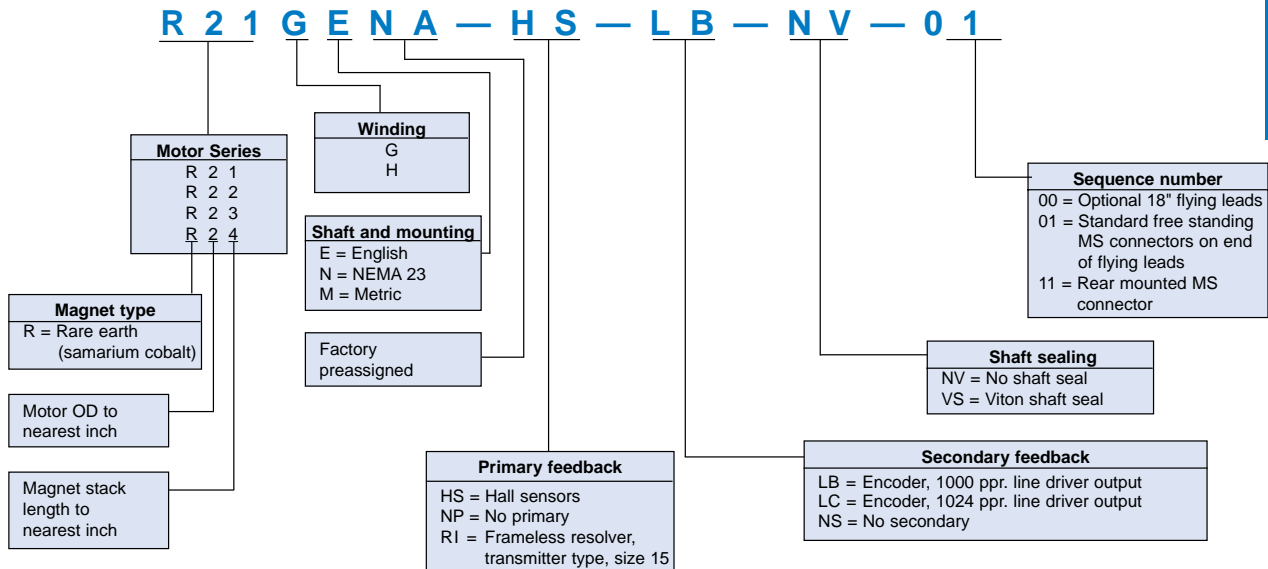

2" OD ROUND -FRAME MOTOR

HIGH DYNAMIC RESPONSE OVER A WIDE SPEED RANGE — IN A COMPACT PACKAGE

MODEL NUMBER CODE. . . R20 Series

To construct a motor listing, select the combination of features required and put all the coded information in the proper sequence. Please account for all entries. Include the factory-preassigned "N" and "A" as noted. The model number shown is an example of a properly specified motor.

R-SERIES

R20 SERIES MOTOR — 2" OD (round frame)

- 4-pole synchronous servomotors
- Samarium-cobalt permanent magnets for maximum torque-to-inertia without demagnetization
- 240V ac, 320V dc bus maximum operation
- Anti-cog stator design
- MS-type connectors on 18" leads
- Rated speeds to 11,000 RPM

The R20 Series of round brushless servomotors covers a continuous torque range from 0.3 to 1.1 Nm. These compact motors are well-suited for speed and position control applications that require high acceleration and torque in a compact package.

RATINGS AND CHARACTERISTICS

Motor parameters and winding data. See system data beginning on page 4 for typical torque/speed performance.

HIGH TORQUE-TO-INERTIA FOR UNMATCHED PERFORMANCE

MODEL NUMBER CODE. . . R30/R40/R60/R80 Series

To construct a motor listing, select the combination of features required and put all the coded information in the proper sequence. Please account for all entries. The model number shown is an example of a properly specified motor.

R30 SERIES MOTOR — 3.25" width/height (square frame)

- 4-pole synchronous servomotors
- Samarium-cobalt permanent magnets for maximum torque-to-inertia without demagnetization
- Low rotor inertia for rapid accel/decel
- 240V ac, 320V dc bus operation
- Anti-cog stator design
- Rated speeds to 7,000 RPM

The R30 Series motors cover a continuous torque range from 1.7 to 3.8 Nm. These compact motors are well-suited for speed and position control applications that require maximum performance in minimum space.

R40 SERIES MOTOR — 4.25" width/height (square frame)

- 4-pole synchronous servomotors
- Samarium-cobalt permanent magnets for maximum torque-to-inertia without demagnetization
- Low rotor inertia for rapid accel/decel
- 240V ac, 320V dc bus operation
- Anti-cog stator design
- Rated speeds to 5,300 RPM

The R40 Series motors cover a continuous torque range from 3.9 to 7.6 Nm. These motors are characterized by smooth operation at low speeds, rapid acceleration and deceleration, and high torque production throughout a wide speed range.

RATINGS AND CHARACTERISTICS

Motor parameters and winding data. See system data beginning on page 4 for typical torque/speed performance.

R-SERIES

R60 SERIES MOTOR — 5.75" width/height (square frame)

- 4-pole synchronous servomotors
- Samarium-cobalt permanent magnets for maximum torque-to-inertia without demagnetization
- Low rotor inertia for rapid accel/decel
- 240V ac, 320V dc bus operation
- Anti-cog stator design
- Rated speeds to 6,000 RPM

The R60 Series motors cover a continuous torque range from 8.3 to 19.9 Nm. Built for heavy duty applications, these motors deliver excellent torque, speed and/or velocity control.

RATINGS AND CHARACTERISTICS

Motor parameters and winding data. See system data beginning on page 4 for typical torque/speed performance.

mm (in.)

R80 SERIES MOTOR — 7.5" width/height (square frame)

- 4-pole synchronous servomotors
- Samarium-cobalt permanent magnets for maximum torque-to-inertia without demagnetization
- Low rotor inertia for rapid accel/decel
- 240V ac, 320V dc bus operation
- Anti-cog stator design
- Rated speeds to 4,000 RPM

The R80 Series motors cover a continuous torque range from 22.5 to 53.4 Nm. Providing excellent torque, speed and/or velocity control, they are built for extremely high torque and power applications.

RATINGS AND CHARACTERISTICS

Motor parameters and winding data. See system data beginning on page 4 for typical torque/speed performance.

R-SERIES

R30P SERIES MOTOR — 3.25" width/height (square frame)

UL Listed file US E150845 UL/cUL
Meets Cenelec requirements
cert. no. 99E 9844204 EE. dIIB

- 4-pole synchronous servomotors
- Samarium-cobalt permanent magnets for maximum torque-to-inertia without demagnetization
- Low rotor inertia for rapid accel/decel
- 240V ac, 320V dc bus operation
- Anti-cog stator design
- UL Listed, file 150845. Meets UL Division 1, Class 1, Groups C & D
- Meets Cenelec requirements of EN 50014-1992.

- Built-in thermostat
- Rated speeds to 7,000 RPM

R30P Series Explosion Proof motors cover a continuous torque range from 1.3 to 3.1 Nm. These compact motors are well-suited for speed and position control applications that require maximum performance in minimum space — wherever hazardous conditions are present.

R-SERIES

PRIMARY FEEDBACK DEVICES

Primary Feedback Devices			Secondary Feedback Devices
PMA Series Resolver Commutating Encoder SinCos Encoder	PMB Series Resolver Hall Effect Sensors Commutating Encoder	S Series, R Series Resolver Hall Effect Sensors	S Series, R Series Encoder

A selection of feedback combinations are available for the PMA, S Series and R Series motors. Options for the PMA Series include resolver, commutating encoder and SinCos encoder. The R and S Series offers either resolver or Hall effect sensors as primary feedback, and an encoder as a secondary feedback device. The PMA, R Series and S Series motors all use a resolver as feedback for system use with the PC800 and SC/SCE900 Series Drives.

FRAMELESS RESOLVERS (R)

Frameless Resolvers for the PMA and S Series motors

Typical output @ 25°C

Parameter	Units	PMA Series		S Series

Max speed	8,000 rpm

FEEDBACK

BRUSHLESS SERVO MOTOR FEEDBACK COMBINATIONS

PMA SERIES WITH SINCOS ENCODER OPTION

In the SinCos encoder, the interface to the motor controller consists of a process data channel and a parameter channel. The SinCos encoder uses the following basic internal information:

1. A sine/cosine signal with 1024 cycles per revolution.
2. A sine/cosine signal with one cycle per revolution.

3. A reference signal (REF) which appears once per revolution with a length of $<1/1024$ revolution. The reference pulse is transmitted via the microcontroller RS485 interface. When operating the encoder at the maximum frequency, a misalignment of the reference pulse of up to 1 increment may occur.

Specifications

Resolution	1024 line count
Input voltage	8V dc
Input current	100 mA max.
Frequency response	100 kHz max. (up to 100°C)
Rise and fall time	100 nSec. max.
Inertia	1.0×10^{-6} kgm ² max.
Max speed	9,000 rpm
Weight	0.1 kg

Max. misalignment between rising edge of commutation track U & zero crossing of back EMF UV $\leq 3^\circ$ electrical.

Motor Connections

When using the SinCos encoder for primary feedback, Pacific Scientific recommends a 10% derating of motor performance specifications to avoid overheating the encoder.

FEEDBACK

BRAKE OPTIONS TECHNICAL DATA

PMA SERIES MOTORS

The brake is intended for holding or 'parking' of a stationary motor. It may be used for a limited number of emergency stop conditions, however such use will eventually cause wear, leading to eventual malfunction of the brake.

A PMA motor with integral brake must never be subjected to uncontrolled axial forces or shocks to the motor shaft.

Contamination of the motor internal compartment by oil or other foreign materials will result in failure of the brake. Check the suitability of motor sealing for the working environment.

CONNECTOR DESCRIPTIONS...PMB Series Motors

Described here are pinouts of standard Pacific Scientific PMB motors. The pinout of the motor-power connector does not vary among motors with varying feedback configurations.

The pinout of feedback connectors varies with the devices employed and with primary-only or primary-and-secondary configurations.

POWER CONNECTOR

PMB Series

STANDARD PINOUTS– All Series

Connector Pin	PMB Series
1	Phase U
2	Phase V
3	Phase W
4	Ground (Frame)

Shield connected to motor ground point (frame) internal to motor

SUGGESTED MATING CONNECTOR

CONNECTOR PART NUMBER	MATING CONNECTOR PART NUMBER (not supplied)
AMP 172167-1	AMP 172159

FEEDBACK CONNECTOR 15-PIN

PMB Series

STANDARD PINOUTS– All Series

Connector Pin	PMB Series		
	Function Hall Sensor	Resolver	Encoder
1	N/C	S2 (+Sine)	Channel A
2	N/C	S4 (-Sine)	Channel A
3	N/C	S1 (+Cosine)	Channel B
4	N/C	S3 (-Cosine)	Channel B
5	N/C	R1 (+ Ref)	Index
6	N/C	R2 (- Ref)	Index
7	Supply return	N/C	Supply Return ^①
8	+4 to 24V dc	N/C	+5V dc ^①
9	Shield ^③	Shield ^③	Shield ^③
10	N/C	N/C	N/C
11	Thermistor ^②	Thermistor ^②	Thermistor ^②
12	Thermistor ^②	Thermistor ^②	Thermistor ^②
13	Hall 1	N/C	U (Hall 1)
14	Hall 2	N/C	V (Hall 2)
15	Hall 3	N/C	W (Hall 3)

① Encoder supply power is used to power Hall Sensors.

② Thermistor is optional. Pins are not connected without this option

③ Shields are hot connected at motor end.

CABLING AND ACCESSORIES

THE ADVANTAGES OF FACTORY CABLING

The most common — and easily preventable — cause of startup problems is cabling. That's why we offer factory tested, fully terminated connecting cables for PacSci brushless servo systems. Factory cabling saves you time as well as troubleshooting.

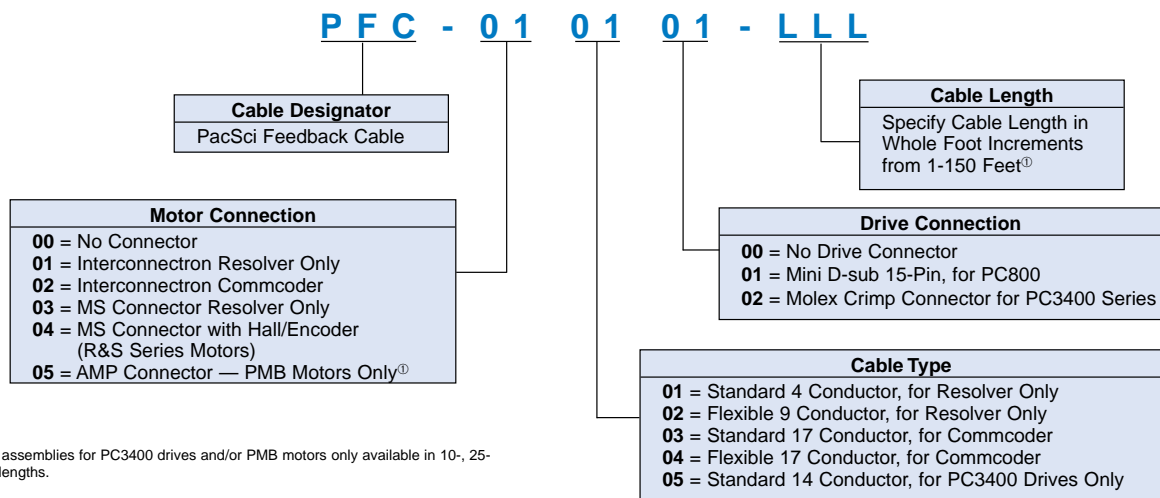

The PC800 drives are equipped with appropriate connectors for system interconnection. The PMA and S Series motors described in this system selection guide are equipped with Interconnectron connectors. PMB motors offer AMP or MS connectors. One power cable and one feedback cable are necessary for connection between motor and drive.

POWER CABLE — PC800 AND PC3400

① Brake cable for MS connector motors sold separately.
 ② Combined power/feedback cable only available with motor connection options, 04, 05 or 060.
 ③ Cable assemblies for PC3400 drives and/or PMB motors only available in 10-, 25- or 50-ft. lengths.

FEEDBACK CABLE — PC800 AND PC3400

① Cable assemblies for PC3400 drives and/or PMB motors only available in 10-, 25- or 50-ft. lengths.

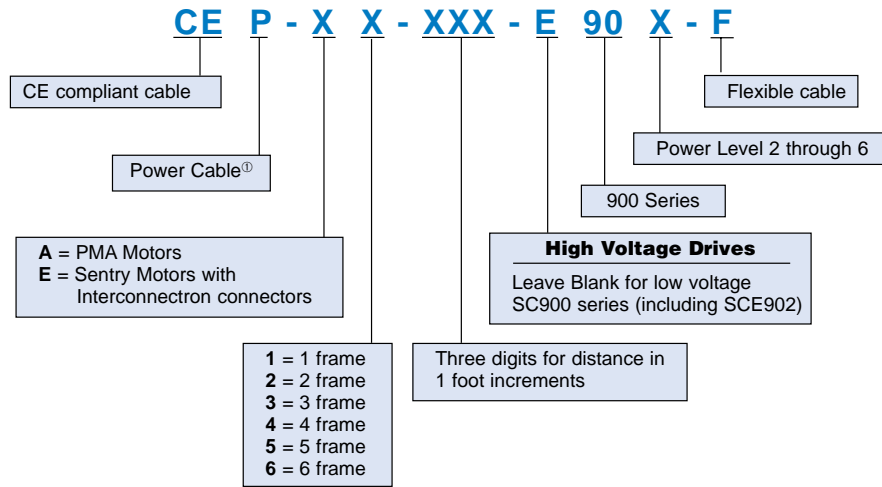

BRAKE, CABLING CONNECTORS

THE ADVANTAGES OF FACTORY CABLING

The most common — and easily preventable — cause of startup problems is cabling. That's why we offer factory tested, fully terminated connecting cables for PacSci brushless servo systems. Factory cabling saves you time as well as troubleshooting.

The SC/SCE900 drives are equipped with appropriate connectors for system interconnection. The PMA and S Series motors described in this system selection guide are equipped with Interconnectron connectors. One power cable and one feedback cable are necessary for connection between motor and drive.

POWER CABLE - SC/SCE900

FEEDBACK CABLE - SC/SCE900

^① Flexible cable is available for High Voltage Drives.
