

# Gearhead Ordering Information

## GEARHEAD SIZE

### NemaTRUE NemaTRUE PLUS NemaTRUE 90

17 = Size 17  
 23 = Size 23  
 34 = Size 34  
 42 = Size 42  
 60 = Size 60  
 90 = Size 90  
 115 = Size 115

### DuraTRUE DuraTRUE 90 DuraTRUE Hollow Shaft DuraTRUE Dual Shaft

60 = Size 60  
 90 = Size 90  
 115 = Size 115  
 142 = Size 142

### UltraTRUE UltraTRUE 90

006 = Size 60  
 075 = Size 75  
 090 = Size 90  
 010 = Size 10  
 115 = Size 115

014 - Size 14  
 018 - Size 18  
 018t - Size 18t  
 022 = Size 22  
 (UltraTRUE ONLY)

### EverTRUE

10 = Size 10  
 14 = Size 14  
 18 = Size 18

### EQ

23 / 60 = Size 23 / 60mm

# DuraTRUE 90\* (Dual Shaft) Right Angle Gearheads

*Ready for Immediate Delivery*

**Precision:** 8 arc-minutes  
**Frame Sizes:** 60, 90, 115, 142mm  
**Torque Capacity:** up to 7659 in-lb

**Ratio Availability:** 1:1 thru 500:1  
**Radial load capacity:** up to 2500 lb  
**Mounting System:** RediMount\*

## Micrometer Adjustable Torque Wrench Series

### Torque Wrench Ordering Information

To ensure that the proper torque is applied to the gearhead pinion assembly, Danaher Motion offers a complete line of easy to use torque wrenches. To order a torque wrench, ask for the corresponding part number along with your gearhead order.

# True Planetary\* Gearheads offer. . .

- **High Torque to Size Ratio** - allows compact design
- **Low Backlash** - eliminates positioning errors due to lost motion
- **Inertia Matching** - keeps servo system stable and in control
- **High Rigidity** - optimizes system response
- **Self Re-lubrication** - eliminates costly maintenance and downtime
- **High Radial Load Capacity** - mount pulleys and pinions directly on the output shaft

# Helical Crowned True Planetary\* Gearing offers.....

- High Torque Capacity
- Low Backlash
- Smooth Operation
- Greater Load Sharing
- Whisper Quiet

Output housing and helical internal gear are machined from a single piece of high strength steel

Helical gears are known for their quiet and smooth operation along with their ability to transmit higher loads than spur gears. Both of these features of helical gearing result from the improved contact ratio (effective teeth in mesh) over spur gears. Crowning is a modification to the gear tooth profile which optimizes gear mesh alignment. It also enhances distribution of loading on the tooth flank, thereby reducing high stress regions which can result in surface pitting.

## Spur vs. Helical Gearing

Typical contact ratio is 1.5 for spur gearing.

Contact ratio for equivalent helical gear is 3.3... **more than double the contact ratio.**

The Contact ratio is defined as the number of teeth in mesh at any given time. The higher the contact ratio, the higher the torque rating of the gearing. **Helical gearing has more than 2X the contact ratio of spur gearing.**

## Crowned vs. Non-crowned

Crowning optimizes the gear mesh alignment within a gear train to increase the torque capacity and reduce noise. It also enhances load distribution on the tooth flank to reduce high stress regions.

UltraTRUE\* in-line planetary gearhead

Planetary gearheads are often selected for high precision motion control applications which require a high torque to volume ratio, high torsional stiffness and low backlash. Until now, these attributes have been sufficient to meet the requirements of the market. Danaher Motion has designed a high torque, whisper quiet helical gearhead to meet the recent improvements in servo motor technology.

Danaher Motion engineers accomplished this by combining the positive attributes of gear crowning and helical gearing with the planetary construction to create the smoothest operating gearhead on the market.

# PowerTRUE\* Right Angle Gearheads offer.....

PowerTRUE\* right angle gearset

Right angle gear meshes are typically limited to ratios from 1:1 to 3:1 when using standard bevel gears. Compared to these designs, the PowerTRUE 90 gear increases the ratio range to 5:1.

The key to higher torque density is a unique tooth design, created by complex machining made practical with advanced CNC equipment and software. In the design, multiple teeth in the face gear simultaneously mesh with a standard involute pinion. The continuous tooth engagement yields a high contact ratio between the gear and the pinion, boosting torques to new levels and efficiency to 98%.

- Lower backlash accomplished through single axis mesh adjustment
- A compact right angle design utilizing a high-tech face gear
- Whisper quiet operation due to high contact ratio
- Mesh ratios from 1:1 to 5:1
- 98% efficiency

# RediMount\* Motor Mounting System

Exploded view of RediMount mounting system

## Mounting Instructions

1- Slide the provided sleeve into the hub and align the slot in the bushing with the slot in the hub.

2- Set the motor on a work surface or hold fixture with the output shaft facing straight up. If there is a key on the motor, remove it and align the keyway with the slot in the hub. Slide the gearhead down onto the motor shaft.

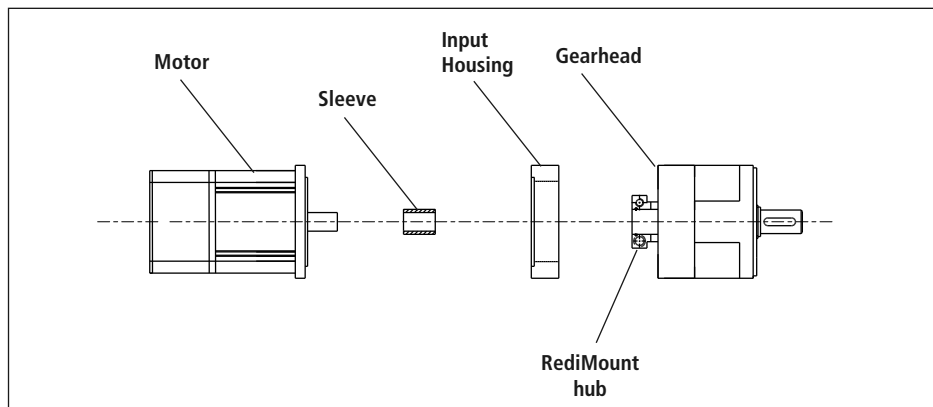

3- Rotate the hub to align the input housing access holes with the hub clamping bolts.

4 - Using a torque wrench tighten the hub bolts to the pre-torque value indicated in the table.

5 - Bolt the motor to the gearhead with the bolts provided.

6 - Gradually tighten the hub bolts in three steps, increasing the torque each time until reaching the final tightening torque in the table.

- **Self-aligning hub** - Maintains concentricity between motor shaft and gearhead
- **Pre-installed pinion** - Eliminates pinion setting procedure
- **Modular design** - Allows gearhead and input housing to be stocked separately
- **Flexibility** - Allows easy changeover to alternate motors
- **Interchangeability** - Same RediMount system is used throughout 7 product lines

**Step 1:** Select the required precision class and gearhead configuration (in-line or right angle).

**Step 2:** Select the proper gearhead using exact or general method.

For continuous duty applications, please contact Applications Engineering.

**General Method:**

**Required Gearhead Torque (T<sub>r</sub>)**

(1)  $T_r = T_M^* \times i \times e$

where:  $T_M^*$  = continuous torque of motor  
 $i$  = gearhead ratio  
 $e$  = efficiency of gearhead

\* Since many motors are capable of exceeding their continuous torque rating for extended lengths of time, the value for  $T_M$  will only provide a starting point for gearhead selection. Only use the general method if the continuous motor rating is not exceeded in the application.

**Exact Method**

**Motion Profile**

$t_n$  = time period n  
 $n_{nm}$  = mean speed during time period  $t_n$   
 $T_n$  = torque during time period  $t_n$

**Mean input speed (n<sub>m</sub>)**

(2)  $n_m = \frac{n_{1m}t_1 + n_{2m}t_2 + n_{3m}t_3 + \dots + n_{nm}t_n}{t_t}$

where  $t_t = t_1 + t_2 + t_3 + \dots + t_n$

**Equivalent torque (T<sub>EQ</sub>)**

(3)  $T_{EQ} = \sqrt[8.7]{T_1^{8.7} \frac{n_{1m}t_1}{n_m t_t} + T_2^{8.7} \frac{n_{2m}t_2}{n_m t_t} + T_3^{8.7} \frac{n_{3m}t_3}{n_m t_t} + \dots + T_n^{8.7} \frac{n_{nm}t_n}{n_m t_t}}$

**Modified equivalent torque (T<sub>EQm</sub>)**

(4)  $T_{EQm} = T_{EQ}^Q$
