

Temposonics®

Magnetostrictive, Absolute, Non-contact
Linear-Position Sensors

E-Series Models EP and EL Analog and Start/Stop Outputs

Document Part Number:
551248 Revision A

Data Sheet

Model EP position sensor - Full Size Profile Housing
Stroke Length: 50 mm to 3000 mm (2 in. to 120 in.)

Model EL position sensor - Low Height Profile Housing
Stroke Length: 50 mm to 2500 mm (2 in. to 100 in.)

FEATURES

- Linear, Absolute Measurement
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.02% F.S.
- Repeatability Within 0.005% F.S.
- Two Outputs Available:
 - Analog (Voltage/Current) Forward or Reverse Acting
 - Start/Stop Output
- Simple Sensor Parameter Upload (for Start/Stop)
- Stroke Length Ranges:
 - 50 mm to 2500 mm (2 in. to 100 in.)
 - 50 mm to 3000 mm (2 in. to 120 in.)*For Model EP Start/Stop*
- EMI Shielded and CE Certified

BENEFITS

- Rugged, Cost Effective, Precise and Durable Non-wear Alternative to Potentiometers
- Simultaneous Multi-position Measurements
- Over Voltage Protection to 36 Vdc and Polarity Protection up to -30 Vdc

APPLICATIONS

- Continuous Operation In Harsh Industrial Conditions

TYPICAL INDUSTRIES

- Factory Automation
- Woodworking and Metal Forming
- Material Handling and Packaging

Benefits of Magnetostriction

Temposonics linear-position sensors use the time-based magnetostrictive position sensing principle developed by MTS. Within the sensing element, a sonic-strain pulse is induced in a specially designed magnetostrictive waveguide by the momentary interaction of two magnetic fields. One field comes from a movable permanent magnet that passes along the outside of the sensor. The other field comes from an “interrogation” current pulse applied along the waveguide. The resulting strain pulse travels at sonic speed along the waveguide and is detected at the head of the sensing element.

The position of the magnet is determined with high precision and speed by accurately measuring the elapsed time between the application of the interrogation pulse and the arrival of the resulting strain pulse with a high-speed counter. The elapsed time measurement is directly proportional to the position of the permanent magnet and is an absolute value. Therefore, the sensor's output signal corresponds to absolute position, instead of incremental, and never requires recalibration or re-homing after a power loss. Absolute, non-contact sensing eliminates wear, and guarantees the best durability and output repeatability.

E-Series Models EP and EL Sensors Product Overview/Specifications

Product overview

MTS Sensors continues to establish new performance standards for low-cost, fully-industrial, durable position sensors using the widely preferred magnetostrictive technology. This principle for accurate and non-contact measurement of linear-position sensing was developed 30 years ago by MTS and is used with outstanding success in a large variety of industrial applications.

The Temposonics models EP and EL sensors consists of robust aluminum profile-style housings that offer flexible mounting configurations and easy installation. Sensor models EP and EL are ideal for demanding industrial applications where simple, reliable non-contact feedback is essential.

Product specifications

Parameters	Specifications	Parameters	Specifications
OUTPUT		ELECTRONICS	
Measured output variables:	Position	Operating voltage:	+24 Vdc nominal: -15% or +20% Polarity protection: up to -30 Vdc Over voltage protection: up to 36 Vdc Current drain: Analog: 50 - 140 mA Start/Stop: 50 - 100 mA <i>(Stroke length dependent)</i> Dielectric withstand voltage: 500 Vdc (DC ground to machine ground)
Resolution:	Analog: Infinite (restricted by output ripple) Start/Stop: 0.1, 0.01 and 0.005 mm (controller dependent)	ENVIRONMENTAL	
Linearity deviation:	< ± 0.02% full stroke (minimum ± 60 µm)	Operating conditions:	Operating temperature: -40 °C (-40 °F) to 75 °C (167 °F) Relative humidity: 90% no condensation Ingress protection: IP 67 <i>(when mating connector is correctly fitted)</i>
Repeatability:	< ± 0.005% full stroke (minimum ± 20 µm)	EMC test:	Electromagnetic emission: EN 61000-6-4 Electromagnetic susceptibility: EN 61000-6-2, This sensor meets the EC directive requirements and is marked with CE.
Outputs:	Analog (voltage or current) Voltage: 0 to 10 Vdc or 10 to 0 Vdc or Two outputs: 0 to 10 Vdc and/or 10 to 0 Vdc (controller input resistance RL ≥ 5k Ohm) Current: 4 to 20 mA or 20 to 4 mA (Controller input resistance RL ≤ 500 Ohm)	Shock rating:	100 g (single hit)/ IEC standard EN 60068-2-27
Stroke length:	Digital-pulse (Start/Stop): RS-422 differential signal Serial parameter upload available for: Measuring range, offset, gradient, status and manufacturer number	Vibration rating:	15 g/10 to 2000 Hz, IEC standard EN 60068-2-6 (resonance frequencies excluded)
	Range: 50 mm to 2500 mm (2 in. to 100 in.) or 50 mm to 3000 mm (2 in. to 120 in.) <i>For Model EP Start/Stop output</i>	WIRING	
		Connection types:	Analog output: 5-pin (M12) male integral connector Start/Stop output: 8-pin (M12) male integral connector
		PROFILE-STYLE SENSOR	
		Electronic head:	Aluminum housing
		Sensor extrusion:	Aluminum (Temposonics profile style)
		Mounting:	Adjustable mounting clamps
		Magnet types:	Captive-sliding magnets, open-ring magnet or block magnet

Outputs

ANALOG (VOLTAGE/CURRENT) OUTPUTS

Analog outputs include voltage (0 to 10 Vdc forward or reverse acting), and current (4 to 20 mA forward or reverse acting). Since the outputs are direct, no signal conditioning electronics are needed when interfacing with controllers or meters (see 'Figure 1').

Analog output voltages ranges:

- 0 to 10 Vdc
- 10 to 0 Vdc
- 0 to 10 Vdc and 10 to 0 Vdc
- 4 to 20 mA
- 20 to 4 mA

DIGITAL START/STOP OUTPUT

Temposonics E-Series Models EP and EL Start/Stop output sensors require a start signal from a controller or interface module to initiate the measurement cycle. The sensor generates a stop signal at the end of the measurement cycle that is used to stop the controller's counter clock.

The elapsed time between the Start and Stop signals is directly proportional to the magnet's position along the active stroke length. The controller can calculate the absolute position of the magnet from the time value and the sensor's unique gradient value (inverse of the speed for the sonic pulse traveling in the sensor's waveguide). (see 'Figure 2').

Figure 1. Analog Output signals

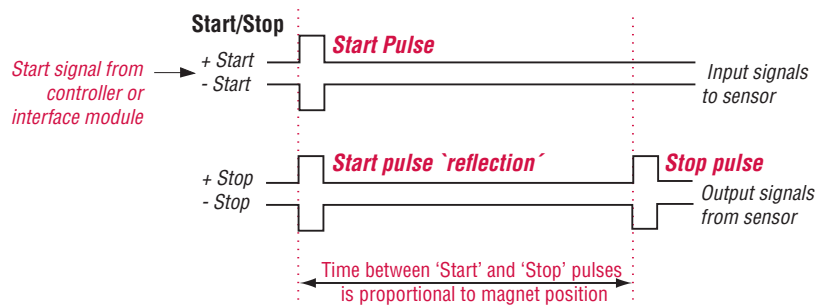

Figure 2. Start/Stop output signals (RS-422 differential pairs)

Dual magnet outputs

MEASUREMENT OPTIONS

E-Series sensors provide options for simultaneous multi-position measurements by using more than one magnet per sensor. When using Start/Stop sensor output the ability to process multiple magnets depends on the capability of the controller or interface module that is used. When using analog type outputs (voltage or current) the sensor is limited to a maximum of two magnets.

For analog output types the options for single-magnet or dual-magnets is specified in the sensor model number when ordered. For single-magnet sensors the sensor's full active stroke length is utilized by the one magnet. For example when using forward-acting outputs, the output is 0% of its value when the magnet is at the null position (start of stroke) and 100% of its value when at the edge of the dead zone (end of stroke), (see 'Figure 3').

However, for dual-magnet sensors the sensor's active stroke length must be shared by the two magnets, and a separation ≥ 75 mm (3 in.) must be maintained between the two magnets (front side of the first magnet to front side of the second magnet). This minimum distance between magnets is needed to maintain proper sensor output. Therefore, for the second magnet the start of stroke (0% output) is set at 75 mm away from the sensor's null position. Likewise, for the first magnet the end of stroke (100% output) is now set 75 mm away from the edge of the dead zone (see 'Figure 3').

The result of using the dual-magnet E-Series options is that the stroke length available for each magnet is 75 mm less (or 3 inches less when specifying stroke length in inches) than the sensor's full active stroke length as indicated in the model number.

When ordering the single-magnet E-Series sensor the minimum stroke length available is 50 mm or 2 inches. However when ordering dual magnet E-Series sensors the minimum stroke length available is 125 mm (i.e. 50 mm minimum, plus 75 mm for the minimum distance between magnets). Likewise, when specifying stroke length in inches the minimum stroke length available is 5 inches (i.e. 2 inch minimum, plus 3 inches for the minimum distance between magnets).

Sensor Communications and Dimension References

Communication

SENSOR PARAMETER UPLOAD FEATURE

For applications using smart sensor interfaces, the Models EP and EL sensors with Start/Stop output (*Option R3*) comes with the ability to perform sensor parameter uploads. This feature replaces the task of entering sensor data manually, saving time and preventing possible entry errors during start-up or for system maintenance.

Note: Start/Stop output (option R3)

When the sensor parameter upload feature is not activated the Start/Stop output (Option **R3**) remains fully compatible with the Start/Stop output (Option **R0**) used in the previous generation E-Series sensors.

The upload feature supports the following sensor parameters:

- Measuring range
- Offset
- Gradient - (Shown as speed of the sonic-strain pulse (m/s) or inverse speed (μs/in.)
- Status
- Manufacturer number

The sensor's specific parameters can be retrieved by the controller/interface module at any time, via the sensor's Start/Stop signal lines.

The sensor parameter upload feature requires a customer supplied RS-422 interface. The data format is serial, 4800 Baud, 8-bit data length. Please contact the factory for additional parameter upload protocol details.

Sensor dimension references

MODEL EP

Figure 7. E-Series model EP sensor dimension reference (Shown with Style L block magnet)

E-Series Models EP and EL Sensors
Standard Magnet and Accessory Selections

Standard magnet selections (Models EP and EL)

Selection of position magnets

A choice of four standard magnet mounting configurations are available for E-Series models EP and EL sensors; A 'captive-sliding' magnet (Styles S or V), or an 'open-ring' magnet (Style M), or the 'block' magnet (Style L). Captive-sliding magnets utilize slide bearings of special material that reduce friction, and if required, help mitigate dirt build up. The slide bearings are designed to operate dry, requiring no external lubrication or maintenance.

The Style M 'open-ring' magnet mounts on the moving machine part and travels just above the sensor's profile extrusion. The open-ring magnet requires a minimum distance away from ferrous metals to allow proper sensor output. It must be mounted using non-ferrous screws and a non-ferrous support bracket, or utilize a non-ferrous spacer of at least 5 mm (0.2 in.) thickness.

The Style L 'block' magnet (part no.: 252887), mounts on the moving machine part and travels just above the sensor's extrusion. The magnet can be mounted using ferrous metal screws on a customer supplied mounting plate or flat surface of the machine's moving part. The mounting plate or machine's moving part can not extend beyond 11 mm (0.43 in.) from the top of the magnet, unless it is made of non-ferrous material. The magnet should be installed in a perpendicular orientation relative to the top surface of the sensor extrusion. Optimal performance is achieved when this orientation remains consistent throughout the full measurement stroke range.

POSITION MAGNET SELECTIONS (All magnets must be ordered separately)

(Drawing dimensions are for reference only)

Magnet / accessory dimensions	Description	Part number

Sensor mounting (Models EP and EL)

SENSOR MOUNTING CLAMPS

E-Series models EP and EL sensors are mounted onto the machine with moveable mounting clamps. Mounting clamps slide into side grooves and should be evenly distributed along the sensor extrusion to best secure the sensor for each particular application.

Notes:

- Models EP and EL sensors include two mounting clamps, (part number 403508), for stroke lengths up to 1250 mm (50 in.). One additional mounting clamp is included for longer stroke lengths.
- MTS recommends using 10-32 cap screws (customer supplied) at a maximum torque of 44 in. lbs. when fastening mounting clamps.

Models EP and EL sensor mounting and installation reference	Mounting method	Part number

Connections and wiring (Model EP and EL)

SENSOR INTEGRAL CONNECTOR (D34 AND D84) PINOUT/WIRE COLOR CODES

The E-Series models EP and EL sensors connect directly to a controller or interface module with the standard male, 5-pin or 8-pin integral connector and an extension cable as described in 'Table 1' and 'Table 2'.

Attention:

The sensors aluminum housing has an anodic coating which prevents the sensor's mounting clamps from providing the appropriate grounding. A grounding lug (see 'Figure 7') is provided near the connector end of the sensor for a convenient connection to earth ground. The appropriate grounding of the cable shield is also required at the controller end.

Figure 7. Grounding lug location.

E-Series Models EP and EL Sensors, Analog and Start/Stop Outputs

Ordering Information

Use the order matrix below to configure your Model EP or EL sensor order number.

SENSOR MODEL _____ = **E** **1 - 2**

- EP** = E-Series model EP profile-style sensor (Magnet(s) must be ordered separately)
- EL** = E-Series model EL low-height profile-style sensor (Magnet(s) must be ordered separately)

HOUSING STYLE _____ = **0** **3**

- 0** = (Zero) EP and EL sensors do not have housing options or magnet types included in the standard model number. Magnets must be purchased separately by part number. Refer to 'Standard magnet selections (Models EP and EL)' in this document for part numbers.

STROKE LENGTH _____ = **4 - 8**

- M** = Millimeters (Encode in 25, 50, or 100 mm increments as indicated in 'Stroke length notes' below).

- U** = Inches (Encode in 1, 2, or 4 in. increments as indicated in 'Stroke length notes' below).

(Digit for tenths of inches is always '0').

Stroke Length Notes:

Stroke length ranges:

M = 50 mm to 2500 mm (up to 3000 mm for model EP Start/Stop only)

U = 2 in. to 100 in. (up to 120 in. for model EP Start/Stop only)

The increment size between standard stroke lengths vary as shown below:

Stroke length (mm)	Ordering increment
≤ 500 mm	25 mm
> 500 mm and ≤ 2500 mm	50 mm
> 2500 mm and ≤ 3000 mm (For Model EP Start/Stop only)	100 mm
Stroke length (IN)	Ordering increment
≤ 20 in.	1 in.
> 20 in. and ≤ 100 in.	2 in.
> 100 in. and ≤ 120 in. (For Model EP Start/Stop only)	4 in.

SENSOR CONNECTION TYPES _____ = **D** **9 - 11**

- D34** = 5-Pin (M12), male, (Analog output)
- D84** = 8-Pin (M12), male, (Start/Stop output)

INPUT VOLTAGE _____ = **1** **12**

- 1** = + 24 Vdc (+20%, -15%), standard

OUTPUT _____ = **13 - 15**

(2 or 3 digit code defined by output option selected).

VOLTAGE

- V01** = 0 to 10 Vdc (1 output channel with 1 magnet)
- V11** = 10 to 0 Vdc (1 output channel with 1 magnet)
- V02** = 0 to 10 Vdc (2 output channels with 2 magnets) Refer to 'Dual magnet outputs' for more information.
- V12** = 10 to 0 Vdc (2 output channels with 2 magnets) Refer to 'Dual magnet outputs' for more information.
- V03** = 0 to 10 Vdc and 10 to 0 Vdc (2 output channels with 1 magnet)

CURRENT

- A01** = 4 to 20 mA (1 output channel with 1 magnet)
- A11** = 20 to 4 mA (1 output channel with 1 magnet)
- A02** = 4 to 20 mA (2 output channels with 2 magnets) Refer to 'Dual magnet outputs' for more information.
- A12** = 20 to 4 mA (2 output channels with 2 magnets) Refer to 'Dual magnet outputs' for more information.

START/STOP

- R3** = Start/Stop with sensor parameters upload function

Start/Stop output (Option **R3**) is fully compatible with the Start/Stop output (Option **R0**) used in the previous generation E-Series
