

MDM N-Series Product Guide

Flexible, simple,
economical drop
in replacement for
Rockwell N-Series

MDM N-Series Product Guide

The MDM N-Series is based on Torque Systems industry leading MDM technology, which provides energy efficient motor configurations in NEMA 23, 34, 42 and 56 standard frame sizes. These motor configurations are ideal for use in Semiconductor, Robotics, and Material Handling, as well as Web Processing, Printing and Packaging industry applications.

Torque Systems engineers designed the MDM N-Series to effectively replace Rockwell's discontinued N-Series motor.

FEATURES	BENEFITS
Identical front flange and shaft for all MDM N-series offerings	Identical front flanges and shafts is convenient for easy replacement installation
Identical electrical connectors for all MDM N-Series offerings	Eliminating "change-out" headaches
Full IP 65 compliance without shaft seals (optional shaft seals are available)	Maintains internal integrity in a wet environment
Complete conformance to UL/CUL and CE standards across the entire product line	Required industry defined standards conformance in North America
Higher torque densities as compared to original N-series product offerings	Same or better overall performance in a smaller package size
Motor-brake feature standard across the entire product line	Flexible option convenience for most replacement requirements
Brake current within maximum available system current for all configurations	Customers need not modify their designs in anyway to manage brake current issues. Easy Integration!
Optional encoder line counts up to 5,000 available for all configurations	Performance enhancement and feature convenience that allows Torque Systems motors to be considered and incorporated into a broader range of applications

- (1) Specification at 40 degrees C ambient with motor mounted on T0601 and T0851 : 254 mm x 254 mm x 6.35 mm; T1101 & T1102: 304.8 mm x 304.8 mm x 12.7 mm aluminum heat sink
- (2) Values @ 25 degrees C ambient
- (3) Peak value of sinusoidal phase to phase voltage
- (4) Peak value of per phase sine wave amps
- (5) Power & feedback connectors are on the flying lead end - not on the motor
- (6) Note inertia differences and validate application suitability
