

FM060-25-RM

FlexPro® Series

Product Status: Active

SPECIFICATIONS

Current Peak	50 A
Current Continuous	25 A
DC Supply Voltage	10 – 55 VDC
Network Communication	RS485/232

The **FM060-25-RM** is a single-axis servo drive and integration board assembly for a FE060-25-RM FlexPro® series servo drive with IMPACT™ architecture. Connections to the controller, motor, power, and feedback are simplified through the standard connectors featured on the board.

The **FM060-25-RM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, stepper motors, and AC induction motors. The drive accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FM060-25-RM** utilizes RS485/232 network communication and is configured via USB. All drive and motor parameters are stored in non-volatile memory.

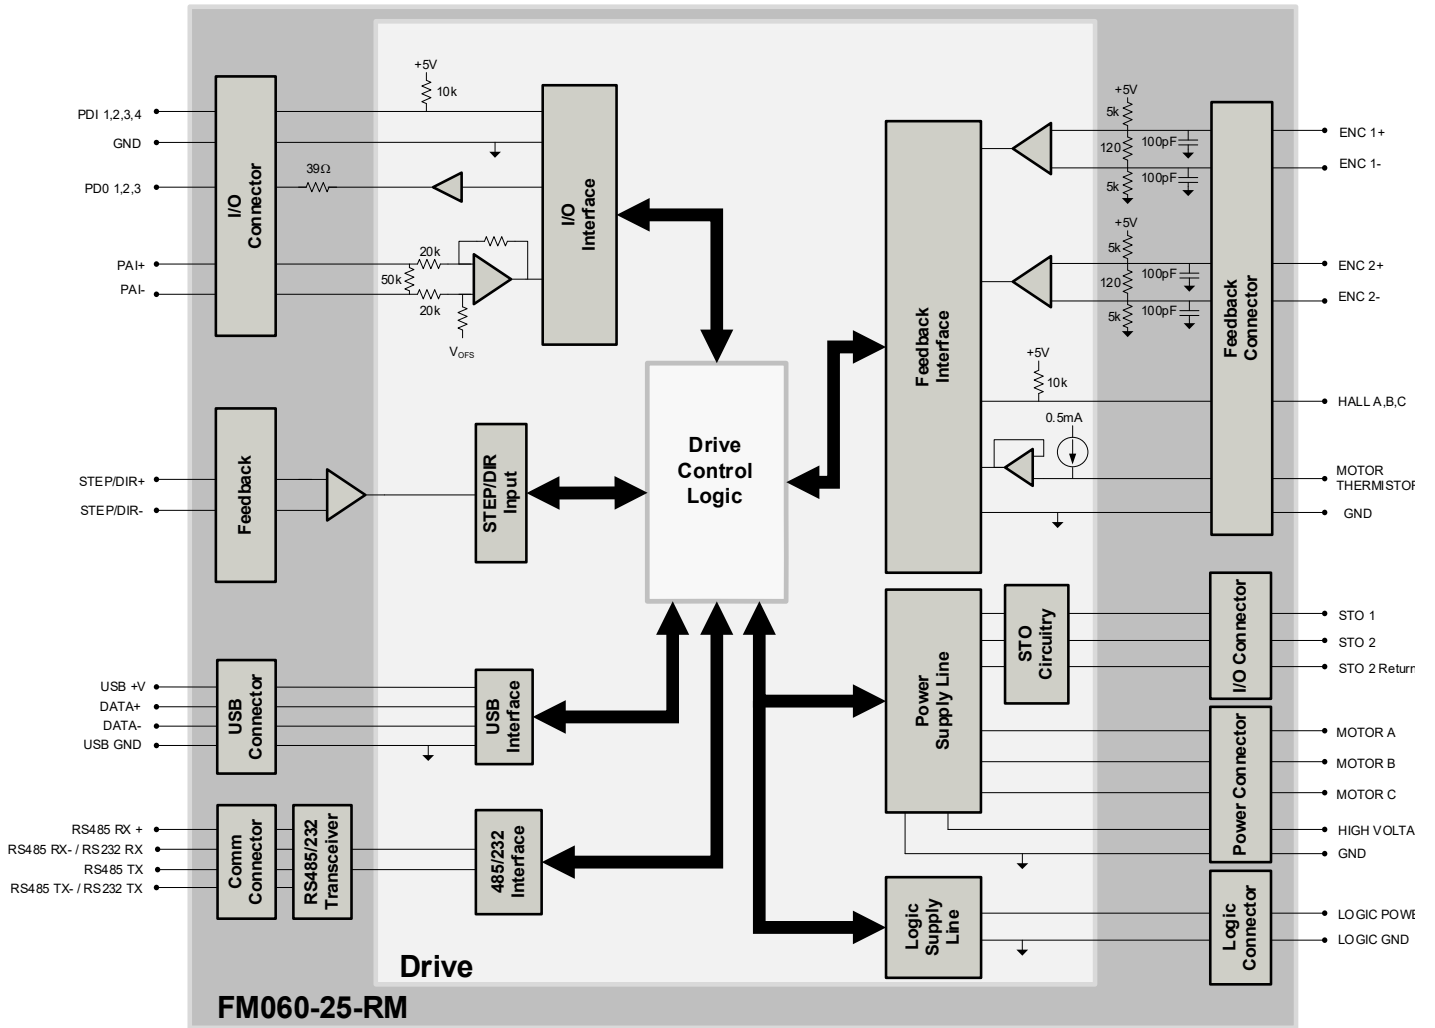

IMPACT™ (Integrated **M**otion **P**latform **A**nd **C**ontrol **T**echnology) combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT™ is used in all FlexPro® drives and is available in custom products as well.

FEATURES

- Standard Connections for Easy Setup
- Four Quadrant Regenerative Operation
- Programmable Gain Settings
- PIDF Velocity Loop
- On-the-Fly Mode Switching
- On-the-Fly Gain Set Switching
- Dedicated Safe Torque Off (STO) Inputs
- Bridge Status, Fault and Network Status LEDs
- I/O Status LEDs

Notes

- Capable of supplying drive rated peak current for 2 seconds with 10 second foldback to continuous value. Longer times are possible with lower current limits.
- Continuous I_{Arms} value attainable when RMS Charge-Based Limiting is used.
- Applications with a supply voltage higher than 30VDC require a minimum external decoupling capacitance of 470µF / 100V added across HV and POWER GND.
- Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
- Maximum motor speed for stepper motors is 600 RPM. Consult the hardware installation manual for 2-phase stepper wiring configuration.
- Additional cooling and/or heatsink may be required to achieve rated performance.

BOARD CONFIGURATION

Status LED Functions

LED	Description
STAT	Indicates drive power bridge status. GREEN when DC bus power is applied and the drive is enabled. RED when the drive is in a fault state.
LOGIC PWR	Indicates that +5V logic power is available to the drive. GREEN when +5V logic power is available.

Switch Settings

The RS485/232 drive address and baud rate are set using DIP Switch SW1. Switch settings are given in the below table.

SW1	Description	On	Off
1	Bit 0 of binary RS485/232 address.	On = 1, Off = 0. Note that setting all addressing switches to 0 will use the address stored in NVM. Default setting is NVM address.	
2	Bit 1 of binary RS485/232 address.		
3	Bit 2 of binary RS485/232 address.		
4	RS485/RS232 Select	RS485	RS232 (default)
5	Baud Rate	115.2k	Set via software (default)
6	RS485 2-wire / 4-wire Select	2-wire	
7	RS485 2-wire / 4-wire Select		
8	Network Termination	Terminated	Not Terminated (default)

Safe Torque Off (STO) Inputs

The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by following the STO Disable wiring instructions as given in the hardware installation manual.

Mating Connector Kit

Mating connector housing and crimp contacts can be ordered as a kit using ADVANCED Motion Controls' part number KC-MC1XFM01. This includes mating connector housing and crimp style contacts for the Communication, I/O and Logic, and Feedback connectors. The recommended tool for crimping the contacts is Molex PN: 63819-1500 (not included with the kit).

PART NUMBERING AND CUSTOMIZATION INFORMATION

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.
